A watermelon is 92% water.

You need three things to grow watermelon: sun, bees and water.

The first recorded watermelon harvest occurred nearly 5,000 years ago in Egypt.

Watermelon is a vegetable! It is related to cucumbers, pumpkins and squash.

According to Guinness World Records, the world’s heaviest watermelon was grown in 2005, weighing 268.8 pounds!

Not only does it quench your thirst, it can also quench inflammation that contributes to conditions like asthma, atherosclerosis, diabetes, colon cancer, and arthritis.

Watermelon is grown in over 96 countries worldwide.

In China and Japan watermelon is a popular gift to bring a host.

Every part of a watermelon is edible, even the seeds and rinds.
